A 58-year-old man has been examined for the first time on 2012.09.28. Discovery of numerous drusen on the ocular fundus. Confirmation is made by O.C.T (Figure 1 and Figure 2). A prescription of alimentary complement is seriously advised to the patient. The patient is at new consulted on 2013.09.26 after taking each day one tablet of alimentary complement. The control with O.C.T. shows an important regression of the drusen (Figures 3 and Figure 4). The prescription of alimentary complements has been maintained and
